PUBLIC COMPANION - CONCEPTUAL ARCHITECTURE

The Missing Infrastructure for Finance Agents

A governed finance operating model from regulation to ledger

Dosev AI - July 2026 - conceptual architecture

Finance repeatedly rebuilds the decision trail

WHAT THE LEDGER RETAINS

Entity
Account
Amount
Currency
Date
Document
Approver

WHAT IS OFTEN FRAGMENTED

Effective authority
Approved interpretation
Calculation version
Evidence set
Preparer and reviewer logic
Exception rationale
Change impact

A regulation-to-ledger control plane

External authority

Approved policy

Tested rule

Role-bounded agents

Independent review

Controlled execution

Provenance

Each layer is independently owned, versioned, and reviewable.

One knowledge constitution, different role permissions

PREPARE AND ANALYZE

Accounting: classify and prepare

Tax: validate treatment

Treasury: payment and liquidity

FP&A: forecasts and scenarios

CHALLENGE AND AUTHORIZE

Chief accountant: independent review

Controller: materiality and period

Control: permissions and thresholds

Human owner: accountable authorization

The first proof can be deliberately small

Versioned policy

Branch + PR

Automated tests

Required review

Protected merge

Approved commit

Runtime read

Authoring agents propose. Runtime agents read. Reviewers approve. Start with synthetic cases - not live ERP posting.

Finance agents need more than access. They need authority, roles, review, and evidence.

Specialist agents perform bounded work. Reviewer agents challenge it. Control agents enforce policy. Humans authorize judgment. Every material decision remains traceable to approved corporate knowledge.
